EARLY RESULTS CONFIRM

Clinical and Economic Value of the ATTUNE® Knee System

Comprehensive Evidence Generation

The ATTUNE® Knee System represents the **largest research and development project in the history of DePuy Synthes**,¹⁰ backed by a comprehensive evidence generation program that encompasses clinical and patient reported outcomes as well as health economics studies.

Positive Early Registry Results

The latest results from the 2017 Australian Orthopaedic Association National Joint Replacement Registry (AOANJRR) and National Joint Registry for England, Wales, Northern Ireland and the Isle of Man (NJR) showed early favorable results for primary total knee arthroplasty (TKA) with the ATTUNE Knee.

AOANJRR

97.9%

ATTUNE Cruciate Retaining Knee survivorship at three years.¹

The CR ATTUNE Knee performs in line with the overall class of cemented, minimally stabilized total knee arthroplasty (TKA) at three years which has an estimated cumulative percent revision of 2.2% (2.1, 2.3).¹ The PS ATTUNE Knee compares favorably with the overall class of posterior stabilized cemented TKA at three years which has an estimated cumulative percent revision of 2.9% (2.8, 3.0).¹

98.9%

ATTUNE Posterior Stabilized Knee survivorship at three years.¹

NJR

The NJR publishes an annual report including one, three and five-year outcome data; however, additional implant survivorship data is now also available more frequently to manufacturers who subscribe to the NJR's Implant Summary Report service. The below is from the most recent NJR Implant Summary obtained by DePuy Synthes:¹

98.1%

Implant survivorship at four years.²

The **independent analysis** of 14,936 ATTUNE Knee implantations in the NJR Report, showed that the cumulative revision rate (CRR) for the ATTUNE Knee is 1.9% at four years (98.1% implant survivorship at four years), which is in line with the overall class of total knee replacement of 1.9% CRR at four years.¹ The 5 year estimated cumulative rate of revision for the ATTUNE Knee is currently based on a sample size of 64 patients, with two late revisions influencing this estimate.¹

Value-Based Healthcare: From Hospital to Home

39% lower odds of patient discharge to a skilled nursing facility for those patients implanted with an ATTUNE Knee, compared to those patients who received a TKA with a Triathlon® Knee, according to the results of a large U.S. hospital administrative database review.³

Going home following TKA vs. being discharged to a skilled nursing facility may potentially impact patient satisfaction and reduce health care costs.³

Improvements in Patient Reported and Patellofemoral Outcomes

One year results from two worldwide studies showed improved patient reported outcomes with the ATTUNE Knee compared to certain other leading knee systems examined in those studies.⁴ Four independent studies demonstrated improved patello-femoral outcomes, including reduced incidence of symptomatic crepitus when compared to the well performing SIGMA® Knee.⁶⁻⁹

Confidence in knee performance⁴

Activities of daily living⁴

Quality of life⁴

Improved patellofemoral outcomes⁶⁻⁹

Innovative ATTUNE Knee Features Help Address Unmet Needs

60+ patents

in the U.S. granted for key inventions related to the ATTUNE Knee Implants and Instruments.

ATTUNE GRADIUS™ Curve

Geometry of the curve is designed to address the unnatural sliding of the femur on the tibia, to provide smooth motion and stability during everyday activities.⁵

GLIDERIGHT™ Articulation

Four independent studies demonstrated improved patello-femoral outcomes, including reduced incidence of symptomatic crepitus while maintaining optimal patella motion.⁶⁻⁹
